

CLAIMS

1. A method of topical scar treatment or prophylaxis using a medical applicator and/or packaging device for the topical application of a fluid gel topical scar therapy agent contained therein, characterised in that the agent comprises a composition comprising:
 - 1-25 wt% of a silicone gum;
 - 1-40 wt% of a silicone fluid having a viscosity of 10 to 60,000mm²/s at 25°C;
 - 10 1-35 wt% of a silicone wax; and
 - 1-90 wt% of a volatile silicone fluid having a viscosity up to and including 5mm²/s at 25°C.
2. The method according to claim 1 characterised in that the silicone gum comprises a hydroxyl-terminated polydimethylsiloxane and is present in an amount of 5 to 15 wt%.
3. The method according to claim 1 characterised in that the silicone fluid has a viscosity of 20 to 20,000mm²/sec at 25°C and is present in an amount of 20-30 wt%.
4. The medical applicator and/or packaging device according to claim 3 characterised in that the silicone fluid comprises a mixture of silicone fluids having a viscosity of about 20mm²/s at 25°C and 12,500mm²/s at 25°C.
- 25 5. The method according to claim 1 characterised in that the silicone wax comprises a trimethylsiloxy-terminated dimethyl, methyloctadecylsiloxane and is present in an amount of 5 to 15 wt%.
- 30 6. The medical applicator and/or packaging device according to claim 1 characterised in that the volatile silicone fluid comprises hexamethyldisiloxane and is present in an amount of 40 to 70 wt%.
- 35 7. The method according to claim 1 characterised in that the medical applicator and/or packaging device is a roller-ball pen.

8. A medical applicator and/or packaging device for topical scar treatment or prophylaxis by the topical application of a fluid gel topical scar therapy agent contained therein characterised by the use of a fluid gel topical scar therapy agent of claim 1.

5

9. A medical applicator and/or packaging device for topical scar treatment or prophylaxis according to claim 8, characterised in that it is a roller-ball pen.
